Sruthy Suresh

UI/UX Designer | Product Designer

Bangalore, India | sruthysuresh.mail@gmail.com | 9980510855

Portfolio: portfolio-psi-orcin-5hqumbws3l.vercel.app | LinkedIn: linkedin.com/in/sruthy-suresh02

PROFESSIONAL SUMMARY

UI/UX and Product Designer with an MCA background, focused on creating intuitive, user-centered web and mobile experiences. Skilled in Figma, high-fidelity prototyping, wireframing, interaction design, user research, and information architecture. I combine design thinking with technical knowledge to create accessible, usable, and development-ready digital products.

SKILLS

Design: wireframing, user flows, prototyping, visual design, interaction design, design systems, component-based design, typography, layout, responsive design, accessibility

Research: user research, usability testing, personas, empathy maps, journey maps, information architecture

Tools: Figma, FigJam, Adobe Photoshop, Adobe Illustrator, AI-assisted prototyping (vibe coding)

Collaboration: working with product and engineering teams, design handoff, documentation

PROJECTS

Odyssey: India Travel Discovery App | UI/UX Design, Figma

Figma: figma.com/design/tcC7mmdU8ROKpSxOR9mJY1/Discover-India

A website concept for travelers who want to find places, local food, wildlife, and nature spots across India without piecing it together from social media and search.

- Created two personas, a curious first-time explorer and an experienced traveler who shares hidden places, to guide design decisions.
- Mapped user flows and designed wireframes for onboarding, sign-in, explore, community, search, and profile, then built a high-fidelity clickable prototype in Figma.
- Designed an interactive state-by-state map of India as the main navigation. Picking a state, like Kerala, opens its places, food, wildlife, and nature spots with ratings, likes, and save options. Improved navigation success rate by 20% after changes based on usability testing.
- Added Community Picks, a recommend-a-place feature, and category and climate filters. Designed error, empty, and success states across key flows.

CoinGrow: Budgeting App for Young Adults | UI/UX Design, Figma

Figma: figma.com/design/EnAsa592J8beBXHUcmCYud/Finance-app

A mobile app that helps first-time earners track their money and build good habits through points, achievements, and friendly competition with peers.

- Designed the core mobile flows: onboarding, sign-up and log in, a home dashboard (net worth, monthly summary, recent activity), budget tracker, achievements, and a weekly peer challenge with a leaderboard.
- Designed sign-up and log in feedback: error messages for age, email, and password, wrong-credentials alerts, success states, and default, pressed, and disabled buttons.
- Added gamification to keep users coming back: Smart Money Points, badges for consistent saving, and peer streaks.
- Explored two full visual directions (yellow and blue, and soft pink) with a piggy-bank mascot and reusable components to make budgeting feel friendly.

CERTIFICATIONS

Google UX Design Professional Certificate (Coursera) **Completed October 2026**

All 7 courses completed, covering UX foundations, empathize/define/ideate, wireframes and low-fidelity prototypes, UX research and usability testing, high-fidelity prototyping in Figma, responsive web UI design, and a social good design project.

EDUCATION

Master of Computer Applications (MCA), RVITM **2024 – 2026**

Bachelor of Science (B.Sc.), St. Joseph's College **2021 – 2024**
